

# Cataract Surgery and your Intraocular Lens (IOL) Choices

## What Are Cataracts?

Cataracts are a clouding of the natural lens in your eye, which makes vision blurry.

## Cataract Surgery

Recovery after cataract surgery usually occurs within a few days. See the chart of options below

## Your Intraocular Lens (IOL) Choices

Intraocular Lens Choices	Near	Intermediate	Distance	Astigmatism
<input type="checkbox"/> <b>Monofocal Lens</b> <ul style="list-style-type: none"> <li>Designed to provide clear distance vision</li> <li>You will likely still need glasses for reading (and possibly distance vision)</li> </ul>			●	
<input type="checkbox"/> <b>Astigmatism-Correcting Monofocal Lens</b> <ul style="list-style-type: none"> <li>Corrects both cataracts and astigmatism</li> <li>Designed to provide clear distance vision without glasses</li> <li>You will likely still need glasses for reading</li> </ul>			●	●
<input type="checkbox"/> <b>Extended Vision Lens</b> <ul style="list-style-type: none"> <li>Corrects cataracts</li> <li>Provides extended range of vision for distant and intermediate tasks and offers functional near vision for tasks like reading a menu or putting on makeup</li> <li>You may still need glasses for reading fine print</li> <li>Not designed to correct for astigmatism</li> </ul>	◐	●	●	
<input type="checkbox"/> <b>Extended Vision Toric Lens</b> <ul style="list-style-type: none"> <li>Corrects cataracts</li> <li>Provides extended range of vision for distant and intermediate tasks and offers functional near vision for tasks like reading a menu or putting on makeup</li> <li>You may still need glasses for reading fine print</li> </ul>	◐	●	●	●
<input type="checkbox"/> <b>Trifocal Lens</b> <ul style="list-style-type: none"> <li>Corrects cataracts</li> <li>Designed to provide a full range of vision—near, far and in-between</li> <li>Not designed to correct for astigmatism</li> </ul>	●	●	●	
<input type="checkbox"/> <b>Trifocal Toric Lens</b> <ul style="list-style-type: none"> <li>Corrects cataracts and astigmatism</li> <li>Designed to provide a full range of vision—near, far and in-between</li> </ul>	●	●	●	●

# Intraocular Lens Choices

## Astigmatism-Correcting IOLs

71% of cataract patients have corneal astigmatism, which is a common condition that may produce blurry vision.

What you may see without glasses after you correct your cataracts and astigmatism together

What you may see without glasses after you correct your cataracts

*The simulated images above are for illustration purposes only.*

## Extended Vision IOLs

Extended vision lenses provide you with a continuous range of vision so you can reduce your need for glasses when performing routine activities after your cataract surgery.

*The simulated images above are for illustration purposes only.*

## Trifocal IOLs

Trifocal IOLs are designed to provide clear vision with increased independence from glasses after cataract surgery at near, intermediate and far distances.

*The simulated images above are for illustration purposes only.*

Speak with your eye doctor about which IOL is right for you
